

Jack Fitz PowerPoint Bullets for 6/18/2010
Operational Period: 6/17/2010 Sampling Period

- The sampling strategy for the day was to investigate three separate stations (Station 5, Station 6, and Station 7) to the north and to the west of the well head. Station 5 was 2.5 km north of the well head, Station 6 was 3 km west of the well head, and Station 7 was 2 km north of the well head.
- Samples were collected at Station 5 using the ROV at 4711 and 4726 feet below surface. Stations 6 and 7 were only monitored with the CTD, due to malfunction of the ROV apparatus. No specific sampling or monitoring data was provided for the operational period.
